CLOUD GOVERNANCE:
Abstraction Layer
VS
Cloud-Native Access

When setting up a cloud governance solution there are two poles of a spectrum: full control provided by an abstraction layer and full flexibility and agility by cloud-native access. Especially in highly regulated industries control is important while agility is key to business success. Find out how to make the most of your cloud governance solution.

Guiding Questions

Is speed one of your major reasons to move to the cloud?
Clouds offer a large variety of services. With an abstraction layer you can manage all innovative services individually before developers can start.

Do you continuously release new services?
Automation is key. If you have an abstraction layer you can manage all services and be able to carry them over to the cloud.

Is attracting new developers a goal?
Developers want to work with the latest technologies. An abstraction layer can help you to attract new developers by providing a familiar environment.
